

Database Design Project

Oracle Baseball League Store Database

Project Scenario:

You are a small consulting company specializing in database development. You have just been awarded the contract to develop a data model for a database application system for a small retail store called Oracle Baseball League (OBL).

The Oracle Baseball League store serves the entire surrounding community selling baseball kit. The OBL has two types of customer, there are individuals who purchase items like balls, cleats, gloves, shirts, screen printed t-shirts, and shorts. Additionally customers can represent a team when they purchase uniforms and equipment on behalf of the team.

Teams and individual customers are free to purchase any item from the inventory list, but teams get a discount on the list price depending on the number of players. When a customer places an order we record the order items for that order in our database.

OBL has a team of three sales representatives that officially only call on teams but have been known to handle individual customer complaints.

Section 2 Lesson 3 Exercise 3 : Entities and Attributes

Identifying Mandatory/Optional Attributes (S2L3 Objective 3)

Using the interview transcript and the already identified entities and attributes from the previous lesson mark which ones you think will be mandatory (*) or optional (o). Remember optional attributes can be blank unlike mandatory ones which must have a value. Check if any of the attributes could be described as volatile, if they can then change them to a non-volatile equivalent.
