

Database Design Project

Oracle Baseball League Store Database

Project Scenario:

You are a small consulting company specializing in database development. You have just been awarded the contract to develop a data model for a database application system for a small retail store called Oracle Baseball League (OBL).

The Oracle Baseball League store serves the entire surrounding community selling baseball kit. The OBL has two types of customer, there are individuals who purchase items like balls, cleats, gloves, shirts, screen printed t-shirts, and shorts. Additionally customers can represent a team when they purchase uniforms and equipment on behalf of the team.

Teams and individual customers are free to purchase any item from the inventory list, but teams get a discount on the list price depending on the number of players. When a customer places an order we record the order items for that order in our database.

OBL has a team of three sales representatives that officially only call on teams but have been known to handle individual customer complaints.

Section 2 Lesson 4 Exercise 1: Unique Identifiers

Identifying Unique Identifiers (UIDs) (S2L4 Objective 1)

Using the Barker notation softboxes, created in the previous exercise, identify any potential candidate keys (attributes that can be used to uniquely identify an entity) that exist within the entities.

- If you can identify any information bearing (natural) UID's then place a # sign as that attribute's optionality and move it to the top of the attribute list.
- If there is more than one attribute (composite) that combined makes the entity unique then place the # sign before each of the attribute names and move all of them to the top of the list.

Potential Entities and Attributes

CUSTOMER

- * Name
- * Address
- * Phone number
- * Email
- * Current balance
- o Team they belong to

TEAM

- * Name
- * Number of players
- o Discount

SALES REPRESENTATIVE

- * Name
- * Address
- * Phone number
- * Email
- * Commission rate

ORDER

- * Date
- * Items purchased
- * Item size
- * Color
- * Price
- * Number of units
- * Total Order Price

ITEM

- * Name
- * Description
- * Price
- * Category
- o Color
- o Size

INVENTORY LIST

- * Cost of the unit
- * Units on hand
