

Database Design Project

Oracle Baseball League Store Database

Project Scenario:

You are a small consulting company specializing in database development. You have just been awarded the contract to develop a data model for a database application system for a small retail store called Oracle Baseball League (OBL).

The Oracle Baseball League store serves the entire surrounding community selling baseball kit. The OBL has two types of customer, there are individuals who purchase items like balls, cleats, gloves, shirts, screen printed t-shirts, and shorts. Additionally customers can represent a team when they purchase uniforms and equipment on behalf of the team.

Teams and individual customers are free to purchase any item from the inventory list, but teams get a discount on the list price depending on the number of players. When a customer places an order we record the order items for that order in our database.

OBL has a team of three sales representatives that officially only call on teams but have been known to handle individual customer complaints.

Section 2 Lesson 5 Exercise 3: Relationships

Identify the Cardinality of Relationships (S2L5 Objective 3)

For the relationships identified in the previous exercise determine the cardinality by analyzing the description given for each relationship. If the description uses “a” or “an” then it should be a 1 relation (single toe) however if it says “many” or “one or more” then it should be a M relation (crow’s foot). Add the cardinality to the following entities by adding any required crow’s foot notation.

- Each CUSTOMER may represent a TEAM
- Each TEAM must be represented by a CUSTOMER

- Each CUSTOMER may be assigned a SALES REPRESENTATIVE
- Each SALES REPRESENTATIVE must be assigned to one or more CUSTOMERS

- Each CUSTOMER may place one or more ORDERS
- Each ORDER must be placed by a CUSTOMER

- Each ORDER must include one or more ITEMS
- Each ITEM may be part of one or more ORDERS

- Each ITEM must be on an INVENTORY LIST
- Each INVENTORY LIST may include one or more ITEMS
