

Database Design Project

Oracle Baseball League Store Database

Project Scenario:

You are a small consulting company specializing in database development. You have just been awarded the contract to develop a data model for a database application system for a small retail store called Oracle Baseball League (OBL).

The Oracle Baseball League store serves the entire surrounding community selling baseball kit. The OBL has two types of customer, there are individuals who purchase items like balls, cleats, gloves, shirts, screen printed t-shirts, and shorts. Additionally customers can represent a team when they purchase uniforms and equipment on behalf of the team.

Teams and individual customers are free to purchase any item from the inventory list, but teams get a discount on the list price depending on the number of players. When a customer places an order we record the order items for that order in our database.

OBL has a team of three sales representatives that officially only call on teams but have been known to handle individual customer complaints.

Section 3 Lesson 2 Exercise : Tracking Data Changes

Keep Track of Data that Changes over Time (S3L2 Objective 1)

This exercise uses the additional scenario and meeting transcript that was provided in previous exercises.

Information that exists in a single entity can only ever store a single (or current) value. If we were to change that value all historical information would be lost. To store both current and historical or alternative data we may have to add entities and relationships to the model to accommodate this extra information.

These are some questions that you can ask that may help you identify the need for historical data:

- Is an audit trail required?
- Can attribute values change over time?
- Can relationships change over time?
- Do you need to query older data?

Using the given scenario add any additional entities and their corresponding relationships that are required to store any data that can change over time or where alternatives are required.
